DETAILED ACTION

Claims 1-81 are pending in the instant application.

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-38, 49-52, drawn to a chimeric protein comprising a plurality of zinc finger domains and a heterologous protein transduction domain, and a cell comprising the chimeric protein.

Group II, claim(s) 39, 79, drawn to a nucleic acid comprising a coding sequence that encodes a polypeptide that comprising a zinc finger domain and a heterologous protein transduction domain, and a host cell comprising the nucleic acid sequence.

Group III, claim(s) 40-48, 57-78, drawn to a method of altering gene expression in a cell, comprising contacting a cell with a chimeric DNA binding protein that comprises a plurality of zinc finger domains and a heterologous protein transduction domain.

Group IV, claim(s) 53-56, drawn to a method of preparing a transducible DNA binding polypeptide, comprising providing a host cell with a coding sequence that comprises a zinc finger domain and a heterologous transduction domain, and isolating the polypeptide.

Group V, claim(s) 80-81, drawn to a method of altering expression of an endogenous gene, comprising introducing into a cell a nucleic acid comprising a sequence encoding a plurality of zinc finger domains and a protein transduction domain.

The inventions listed as Groups I-V do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

Application/Control Number:

10/559,806 Art Unit: 1636

According to PCT Rule 13.2, unity of invention exists only when the shared same or corresponding technical feature is a contribution over the prior art. The inventions listed as Groups I-V do not relate to a single general inventive concept because they lack the same or corresponding special technical feature. The technical feature linking Groups I-V appears to be that they all relate to a polypeptide comprising a plurality of zinc fingers and a heterologous protein transduction domain. However, Sera (US Patent Application Publication No. 2003/0134350 A1) teaches polypeptides comprising a plurality of zinc finger domains and a heterologous protein transduction domain (e.g., Abstract; paragraphs [0177]-[0178] and [0183]). Therefore, the technical feature linking the inventions of Groups I-V does not constitute a special technical feature as defined by PCT Rule 13.2, as it does not define a contribution over the prior art.

Accordingly, Groups I-V are not so linked by the same or a corresponding special technical feature as to form a single general inventive concept.

This application contains claims directed to more than one species of the generic invention of Group I. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are composed of the following sub-species types:

- A) zinc finger motif set forth in a row of Table 2 (claim 6);
- B) protein transduction domain (one domain set forth in claim 12, 13 or 15); and
- C) a further domain (one domain set forth in claim 22, 23, 24, 28, or 30).

Applicant is required, in reply to this action, to elect a single species (a single chimeric protein composed of one elected zinc finger motif, one elected protein transduction domain and one elected further domain) to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. Applicant must indicate which genes recited in claims 4 and 5 are bound by the elected chimeric protein. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Application/Control Number:

10/559,806 Art Unit: 1636

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The following claim(s) are generic: 1.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons:

According to PCT Rule 13.2, unity of invention exists only when the shared same or corresponding technical feature is a contribution over the prior art. The chimeric proteins of Group I do not relate to a single general inventive concept because they lack the same or corresponding special technical feature. The technical feature linking the chimeric proteins of Group I appears to be that they all relate to a polypeptide comprising a plurality of zinc fingers and a heterologous protein transduction domain. However, Sera (US Patent Application Publication No. 2003/0134350 A1) teaches polypeptides comprising a plurality of zinc finger domains and a heterologous protein transduction domain (e.g., Abstract; paragraphs [0177]-[0178] and [0183]). Therefore, the technical feature linking the species of Group I does not constitute a special technical feature as defined by PCT Rule 13.2, as it does not define a contribution over the prior art.

This application contains claims directed to more than one species of the generic invention of Group III. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are composed of the following sub-species types:

- A) protein transduction domain (one domain of claim 65, 66, or 68);
- B) further domain (one of claim 71); and
- C) gene regulated (one of claim 72).

10/559,806 Art Unit: 16

Art Unit: 1636

Applicant is required, in reply to this action, to elect a single species of method where the DNA binding protein is composed of one elected protein transduction domain and one further domain and regulates an elected gene to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The following claim(s) are generic: 57.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons:

According to PCT Rule 13.2, unity of invention exists only when the shared same or corresponding technical feature is a contribution over the prior art. The methods of Group III do not relate to a single general inventive concept because they lack the same or corresponding special technical feature. The technical feature linking the methods of Group III appears to be that they all relate to the use of a polypeptide comprising a plurality of zinc fingers and a heterologous protein transduction domain. However, Sera (US Patent Application Publication No. 2003/0134350 A1) teaches polypeptides comprising a plurality of zinc finger domains and a heterologous protein transduction domain and the use of the polypeptides to modulate gene expression (e.g., Abstract; paragraphs [0177]-[0178] and [0183]). Therefore, the technical feature linking the species of Group III does not constitute a special technical feature as defined by PCT Rule 13.2, as it does not define a contribution over the prior art.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Rejoinder Practice

The examiner has required restriction between product and process claims. Where applicant elects claims directed to the product, and the product claims are subsequently found allowable, withdrawn process claims that depend from or otherwise require all the limitations of

10/559,806

Art Unit: 1636

the allowable product claim will be considered for rejoinder. <u>All</u> claims directed to a nonelected process invention must require all the limitations of an allowable product claim for that process invention to be rejoined.

In the event of rejoinder, the requirement for restriction between the product claims and the rejoined process claims will be withdrawn, and the rejoined process claims will be fully examined for patentability in accordance with 37 CFR 1.104. Thus, to be allowable, the rejoined claims must meet all criteria for patentability including the requirements of 35 U.S.C. 101, 102, 103 and 112. Until all claims to the elected product are found allowable, an otherwise proper restriction requirement between product claims and process claims may be maintained.

Withdrawn process claims that are not commensurate in scope with an allowable product claim will not be rejoined. See MPEP § 821.04(b). Additionally, in order to retain the right to rejoinder in accordance with the above policy, applicant is advised that the process claims should be amended during prosecution to require the limitations of the product claims. Failure to do so may result in a loss of the right to rejoinder. Further, note that the prohibition against double patenting rejections of 35 U.S.C. 121 does not apply where the restriction requirement is withdrawn by the examiner before the patent issues. See MPEP § 804.01.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jennifer Dunston whose telephone number is 571-272-2916. The examiner can normally be reached on M-F, 9 am to 5 pm.

10/559,806

Art Unit: 1636

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Joseph Woitach can be reached at 571-272-0739. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
